
Environmental Management Policy

Basic Principles

Mobile C&C Corporation establishes an environmental management system for a sustainable future and actively pursues climate change response strategies, including setting and managing carbon emission reduction targets and managing environmental risks.

Furthermore, we work with internal and external stakeholders, including employees and customers, to manage the environmental impact of our business activities.

This policy provides company-wide guidelines for responsible environmental practices and explains the direction and response of the group's environmental management activities. Based on this environmental policy, we aim to secure Green Leadership, leading the way in creating an eco-friendly IT ecosystem.

1. we will systematically establish an environmental management system and implement it effectively to continuously improve our environmental management performance.
2. we will continuously strive to conserve natural resources, reduce waste, and minimize pollution. We will prioritize the use of renewable energy and sustainable raw materials and encourage our employees, customers, and suppliers to engage in environmentally responsible behavior.
3. we recognize climate change as a critical environmental issue. As a global financial

institution, we are actively reducing and managing our internal carbon emissions to support the transition to a low-carbon economy.

4. we prevent environmental pollution in advance through improvement activities based on environmental impact assessments.

5. we periodically assess customer satisfaction to meet customer needs and continuously improve customer satisfaction and compliance with environmental and related laws and regulations and other requirements.

CEO of Mobile C&C Corporation Hwangbo Young CHEOL
